THE REDCLIFF REVIEW THURSDAY, DEC. 19th 1935

Number 6

Local Band Gives Program Last Sunday

Was Much Enjoyed By All Who Attended

The local Jubilee Band gave another of its popular concerts in the Little Theatre building last Sunday evening. Unfortunately the review knew nothing about the concert till after it was over and consequently we cannot give a full report of the program. However, from enquiries we made since we learned there was a very good attendance and all thoroughly enjoyed the program. Several also remarked that the band has made a marked improvement since its last public appearance.

We have also been informed that the members are taking a keen interest in the organization and are attending practice regularly. This is the only way an organization can be made a success and we venture the prediction that if this interest is kept up our local band will make a name for itself by next summer.

The public is much interested in the band and should give it every support possible.

Widows of the sixteen miners who were killed in the Coalbrook disaster last week are to receive \$85 a month for life from the Compensation Board. If they remarry they will receive a lump sum of \$150.

CHRISTMAS BAKING

Save your time and money by ordering your Christmas BAKING from the TOWN BAKESHOP

We have a Nice Line of XMAS PUDDINGS, CAKES, PIES, MINCE MEAT, SHORT BREAD, PO-KE PIES

and All Requirements for the Christmas Season

at Reasonable Prices

and Your Smile of Christmas Cheer
Spread on Throughout the Year

Big Improvement in The Wheat Situation

Canada's Opportunity to Dispose Of Wheat Surplus

One of the most encouraging signs of the times is the change which has taken place in the world wheat situation. From a surplus of this principal bread grain, the world is facing a condition where actual scarcity may develop, and the result has been that prices have risen, giving Canada an opportunity to sell heavily of her accumulated surplus.

The chief factor in the change has been the partial failure of the southern hemisphere wheat harvest. The chief factor in the change has been the partial failure of the southern hemisphere wheat harvest. The chief factor in the change has been the partial failure of the southern hemisphere wheat harvest.

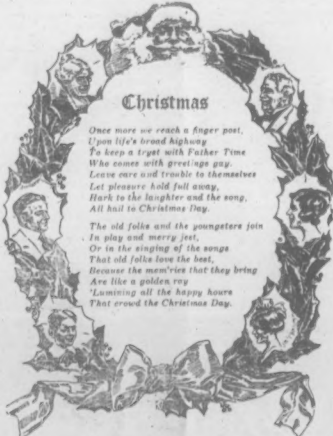

ALBERTA CITIES CAN'T BORROW FROM OTTAWA

The policy of the Dominion government banning money to cities has been discussed, according to word received in Calgary.

In a wire from Mayor Davidson who is in Ottawa, Commissioner Riley was informed the applications for federal loans by the city of Calgary, Edmonton and Lethbridge had been refused. Calgary had asked a loan of \$150,000.

Great Britain practically abandoned the famous Franco-British peace plan in the League of Nations when it today and Ethiopia indicated refusal of it in any event.

How is your "subscription"?

Christmas

Once more we reach a finger post,
Upon life's broad highway
To keep a target with Father Time
Who comes with grating gong.
Leave care and trouble to themselves
Let pleasure hold full sway,
Hark to the laughter and the song,
All hail to Christmas Day.
The old folk and the youngsters join
In play and merry jest,
Or in the singing of the songs
That old folks love the best.
Because the memories that they bring
Are like a golden ray
Lighting all the happy hours
That crowd the Christmas Day.

To Have Canning Factory At Brooks

Will Be in Center of Good Irrigation District

The launching of a new canning industry in Alberta, aimed at taking over some of the market now held largely by Ontario and British Columbia canning companies, was announced by acting premier E. C. Manning.

The headquarters of the new firm, to be known as New National Food Products Ltd., will be at Brooks, Mr. Manning said and it will operate branches throughout the eastern Irrigation district.

In this part of Alberta, it has been determined, farmers can raise vegetables of a quality superior to any other provinces.

ALTA. GOVERNMENT IS GOOD COLLECTOR

Involuntary co-operation with the new government's desire to balance its budget has wrecked the Christmas shopping budget of many a farmer these days. Instead of receiving the gas or refund checks on fuel gas used in the fall operation, numerous expectant beneficiaries have received a polite notification that the amount coming to them has been credited to their debt with the government for seed grain relief. Cheques as high as \$80 are reported to have been paid by means of a polite receipt for government advances for seed grain.

The report of the High School standing for the Xmas Exams will appear in Next issue.

Engineer's Ashes Cast On Track

Fulfilling a last request, the ashes of Anthony Livestock Silvers, who for 39 years drove an engine on the Esquimalt & Nanaimo Railway, operated on Vancouver Island by the Canadian Pacific, were cast along the track he knew and loved so well. Engineer A. C. Wilson, friend of the late "Tony" Silvers and chairman of the Esquimalt & Nanaimo division of the Brotherhood of Locomotive Engineers, is seen performing the last rites in the company of officials and railwaymen near Riverside station at the summit of the spectacular Malahat Pass, 15 miles north of Victoria, B.C.

To Hold Xmas Services In Local Churches

ST. AMBROSE CHURCH
Rev. H. S. Hammett, Vicar.
4th Sunday in Advent Dec 21
8:00 a.m. Holy Communion
11:00 a.m. Matins and Christmas Service.
7:30 p.m. Evensong and Carols.

Christmas Eve, commencing at 11:45 p.m. Holy Communion Christmas Day: As the Evening Broadcast from London Express on this day will be a means of uniting many with their homes so far away, the service times are changed to avoid the time of the broadcast, (7:25-8:00) When the broadcast is over let us all join in worship of the King who gave Christmas His name.
9:00 a.m. Holy Communion, 11:00 a.m. Choral Eucharist. May God bless you each and every one and grant you true happiness and peace, is the sincerest Christmas wish of Your Friend The Padre.

JORDON MEMORIAL UNITED CHURCH

Pastor: Rev. R. Erskine Pusey
Sunday: Dec. 22nd 1935
10 a.m. Church School.
11:15 a.m. Morning Worship Playlet, "The Tenth Anniversary" by members of the Mission Band.
7:30 p.m. Evening Worship. Program: "Perjury and Fulfillment" by members of the Y. Society.
Special Christmas Anthems: at both services.
Christmas Day: Special Service at 11:00 a.m.
Light and Peace flow from the manger-cradle of Jesus to us, is troubled and dark world.

ST. MARY'S CHURCH

Mass will be celebrated on the 3rd Sunday of each month at 8:30 a.m.

CANT DRAW SAVINGS CERTIFICATES

The ending of the suspension on provincial savings certificates payments is not contemplated yet, and holders of these accounts, therefore, will not be able to draw money for Christmas, said Acting-Premier Manning. The suspension of the payment on certificate was ordered by ex-premier R. C. Reid just before he left office. The amount involved is \$9,000,000.

Some Antelope Hunters Are Poor Sports

Chase Antelope With Cars And Break Down Fences

In the magazine section of last Saturday's Calgary Herald there was a very interesting article about the antelope which are growing in numbers in this section of the province. Reference was made to the open season recently for these footed and much admired animals, and attention was drawn to the need of sportsmanship on the part of those who take advantage of the open season.

Shortly after reading this article our attention was drawn to the fact that a number of hunters from Calgary were in this district after antelope during the second open season. This year and our informant tells us that these hunters were most sportsmanlike in their method of running down their prey. It is claimed they chased them by car for miles until the animals became exhausted and then sighted them. Not only this but the hunters went through fences in range areas and made no attempt to put them up again, much to the inconvenience, trouble and expense of the ranchers and farmers of the district. This certainly is not playing the game either with the farmers or the antelope. Since the antelope are so rapidly multiplying and since there is a probability there will be an open season for them every year, it might be a good idea to make an example of thoughtless and unsportsmanlike hunters in the future.

NEW OIL WELL IN S. ALBERTA

The first oil well in the south of Alberta plains area, Terminal No. 1, at Del Bonita, "bleeds" late Sunday.

Oil men predicted production would run as high as 500 barrels daily.

The well, with the strike made at 5,973 foot level, is located 45 miles south of Lethbridge.

Canadian motor car manufacturers have moved for a cancellation of the concessions made to the United States trade treaty. They claimed the benefits to manufacturers due to the reduction of the duties on parts were small compared with the disadvantage due to lowering the duty on finished cars.

Scientists Claim Islands On Atlantic Coast Are Being Slowly Washed Away

Prince Edward Island and the Magdalen Islands are being steadily washed away by the sea, according to an expert government hydrographer who has just completed a survey of their coastlines. Soft red soil of these Gulf of St. Lawrence islands, without the protection of solid rock formation, he said, makes them fall away piecemeal to the increasing action of angry waves. In two places Prince Edward Island has been nearly cut in two.

"But islanders need not worry," the expert, H. L. Leatham of Ottawa, commander of the hydrographic survey ship "Cartier," reassured us. "Mother Nature acts slowly and terra firma is guaranteed the populace for many generations to come."

Then with a laugh he added: "Probably all be washed away before these islands disappear. The process is slow."

Of course there were points that were disappearing faster than others. "The Magdalen Islands are changing continuously. There's Old Harry Head on Coffin Island that is falling away at the rate of 20 to 30 feet a year. The soft red sandstone is just disappearing. For 12,000 years sharply down to two fathoms and there's no sign of where the soil goes."

Prince Edward Island was "scant two miles of being cut in two by the Hillsboro river and the inlet on the north side. But the wearing away process had ceased up here and nature had defeated its own purpose by building up sandbar protection against its forces."

The Cartier has been employed since 1910 in surveying the provinces and Gulf of St. Lawrence waters. It has just been laid up for the winter at Charlottetown, Newfoundland. Anticosti and Prince Edward islands were being surveyed by the northern tip of Cape Breton Island, Newfoundland.

The ever changing coastlines make constant vigilance necessary in order to preserve the accurate charts. The Cartier is a quasi policeman searching for upshots of rock, each-easy of lines.

In the chart-room of this 700-ton government survey ship is the magic eye that penetrates fathoms and automatically takes photographs of the ocean bottom.

"That machine," said Commander Leatham as he pointed to the intricate arrangement in the corner of the chart-room, "is the most modern type of echo sounding. It takes photographs a picture of the bottom by a system of sound vibrations."

Then he unfolded several feet of pictures that showed the bottom of the sea. They were taken off St. Paul's Island at the northern tip of Cape Breton.

"See those vague objects above the ocean floor?" he asked, pointing to his little-convex graph. "They are schools of fish which inadvertently got photographed. You see when schools of fish are over the sea, they were taken off St. Paul's Island at the northern tip of Cape Breton."

"See those vague objects above the ocean floor?" he asked, pointing to his little-convex graph. "They are schools of fish which inadvertently got photographed. You see when schools of fish are over the sea, they were taken off St. Paul's Island at the northern tip of Cape Breton."

In surveying the coastline, aerial photography was done first, then with it as a guide, the Cartier began her submarine photography. "It was a far cry from the days of the early sounding of the gulf by the admiralty with their crude apparatus to the ocean-deep photography of to-day, the government expert remarked, but the admiralty's small scale charts are surprisingly accurate," he added.

The Club Club of the Dominion-wide Boys' and Girls' Farm Clubs at the Shernbrook, Ontario, had recently been the largest assembly of its kind at a provincial exhibition. Two hundred and twelve Club Club members from every part of the province of Quebec took part in showing 168 calves and yearlings and in the different contests for selecting teams to go to the Royal Winter Fair, Toronto.

Antelope Herds Increase

Researchers Claim That They Are Becoming A Nuisance

Harmed by ever-increasing herds of antelope, deer and caribou, the foothill country, southern Alberta, ranchers are wondering what could be done to save their pastures for cattle and sheep.

The animals, once threatened with extinction, were protected with conservation measures and have multiplied so rapidly an open season was declared this year but Royal Canadian Mounted Police reported no applications for the special license to hunt them have been received.

The license, costing \$5, allows hunters to bag two of the antelope.

Cattlemen complain the antelope are eating grass needed for cattle and sheep, besides attacking headstalls. One Wild Horse, Alta., rancher and it costs him the wages and keep of a man and the loss of three pounds in his efforts to drive the animals from his land where they eat his grain and break his fences, steal his cattle and steal the pasture of his cattle.

Wild Horse, in southeastern Alberta, a herd of 1,000 antelope was reported, while other large herds were seen within a mile of Calgary, a mining town eight miles west of Lethbridge.

Had not conservation measures been taken, it is doubtful whether any of these antelope—the pronghorn antelope—would have survived. In 1914 and 1915 by establishment of sanctuaries in Wapiti and New-Campanian national parks and rigid defence of the few provinces and Gulf of St. Lawrence waters. It has just been laid up for the winter at Charlottetown, Newfoundland.

Anticosti and Prince Edward islands were being surveyed by the northern tip of Cape Breton Island, Newfoundland.

THE REVIEW, REDCLIFF, ALBERTA

CANADA HONOURS FAMOUS ADMIRAL'S FEAT

Traveller Day, the anniversary of Nelson's great victory over the French army at Trafalgar, is commemorated each year in the Mother Country by the decorating of the famous Nelson's Column in London. Here we see the Hon. G. H. Ferguson, and Mrs. Ferguson, after they had placed Canada's wreath at the foot of the Column.

Dairy Industry Of Canada

Official Of National Council Sees Big Appeal for "Clean and Intelligent Consideration to the Betterment of Canadian Agriculture"

Speaking at a Canadian Club luncheon in Montreal, Mr. Fraser reviewed the history of the dairy industry in Canada since 1800. He pointed out that the industry has grown from a few scattered farms to a highly organized business.

He pointed out that the industry has grown from a few scattered farms to a highly organized business. He pointed out that the industry has grown from a few scattered farms to a highly organized business.

Excessive Road Speed

Highways in Good Condition Are Temptation To Driver

Neither the authorities nor the public can afford to ignore the fact that traffic offences are practically agreed in declaring that speed is the outstanding cause of highway accidents. Automobiles of to-day are capable of making greater speed than ever before. They can be operated so easily over roads that, generally speaking, are in excellent condition that drivers unconsciously build up their rate of travel to an unsafe speed.

However mechanically perfect an automobile may be, it cannot be brought to a stop as quickly when running at 50 miles an hour as at 20. There is no doubt that thousands of accidents happen because motorists who do not consider themselves reckless drivers forget that at any moment they may be confronted by a situation that necessitates a quicker stop than they can possibly make.

Highway Bureau

Game Ducks Disappearing

Conservation Methods Must Be More Rigidly Enforced

Six types of game ducks in North America are threatened with extinction unless conservation methods are more rigidly enforced and natural enemies of the ducks are combated.

Mr. C. Oberholser, senior biologist in the biological survey at Washington, D.C., has written to the Ontario Game and Fish Commission.

He pointed out that the industry has grown from a few scattered farms to a highly organized business. He pointed out that the industry has grown from a few scattered farms to a highly organized business.

Responsibility Of Research Workers In Regard To Human Welfare

Whales Attack Boat

Exciting Experience Of Fishermen In The Bay Of Chaleur

A violent attack by five whales while a sloop, entangled in the anchor cable, threatened to pull their 25-ton boat to the surface.

The boat was anchored and threw out a line the boat began jerking from side to side as the low heaved.

One after another the felloes began charging the boat, and kept at it for about an hour," he said. "As soon as they got close to us they dived under. Several times I could have touched them, with an oar. Quite often their backs just scraped my keel as they went underneath. They were going so fast that when they came up on the other side and turned to come at us again they skidded right over on their sides. Several times their tails came within a few feet of smashing the boat. What with their splashing and blowing they pretty near drowned us."

After coming clear each time they charged, and I knew that it would only be a matter of time before they would strike the boat. We got to cutting the cable, and we began to pull the bow. Right then it was about eight inches above water.

"We gripped the cable to pull it around the side to get it to cut it, when we felt something else hit the bow and came up with a jerk. The five whales charged once more and then disappeared. It was the last I saw of them. I was over 100 miles from shore."

Chalk As We Know It

Was Made Conventional For School Use By Dr. Field

One hundred years ago school chalk as we know it, was invented. The man who brought this precious boon to the classroom was Dr. Field, of Waltham, Mass.

Up to that time the chalk used was the crude mineral brought from France, which was far less than satisfactory. Dr. Field hit upon the idea of pulverizing the crude chalk, removing its impurities and then moulding it into convenient sticks. Of course there have been many refinements since that time, but the boys and girls in school today as well as those whose school days are over, might give thanks to Dr. Field on this centenary.

The blackboard with its chalk illustrations of the counties and provinces is a thing of the past. The atmosphere reaches of mathematics, has been an essential aid in the teaching of education. It goes with the pupil from kindergarten to university. The Chinese philosopher, who said, "No picture is worth 10,000 words," was paying an advance tribute to the blackboard and its 100-year-old teammate, chalk.

Heading For Danger Zone

Elementary Scientist Says Moon Will Soon Disintegrate

The moon eventually will disintegrate into countless particles, bathed in the earth in perpetual moonlight, Sir James Jeans, noted British scientist, has predicted.

"We have good reason to believe the moon soon will split into pieces," Sir James, head of the Royal Astronomical Society, declared.

He said the moon is heading for a danger zone near the earth and will first break in two, then four, then eight fragments, which eventually will become myriads. These particles will resemble Saturn's rings, trailing continual material on the earth," he said.

Proved Idea Was Wrong

At one time the late Andrew Carnegie believed that if Great Britain were to survive she must ship the royal family back to Germany, chuck overboard the established church and the nobility and reorganize on American lines, with a President, Senate, Supreme Court, etc. And the steel master said a lusty back roll into several English publications to put that and by propaganda-and got, of course, exactly nowhere.

There are plants which open and close at such definite hours of the day that it is possible to tell fairly accurately time by them.

Science is growing into a Frankenstein monster which soon the scientists of the world themselves may not be able to handle.

This fear is expressed by Sir Richard Gregory, one of the greatest scientists in British Isles. Other scientists agree with Sir Richard.

Two years ago, the British Association formed a "brain trust" in an attempt to check the monster in chains, but Sir Richard now admits that the attempt has failed.

A short time ago, Sir Richard in a dramatic speech at a Rotary luncheon at Norwich, Norfolk, defended the modern scientist and tried to explain that the man with a test tube is not a man with a load of mischief. He said that the use of good or evil is a discovery dependent on the community.

Now, however, Sir Richard has changed his mind and frankly admits that there is justification in the increasing uneasiness and suspicion with which the ordinary man is viewing the efforts of the laboratory.

"Ethical considerations are almost totally non-existent among scientists," he observed. "To them scientific knowledge is the thing. Just recently I saw a description in a journal of some new material gas."

"The scientist who published that paper did not speak of his discovery as a mustard gas. He had merely effected a re-grouping of certain compounds."

"But his achievement was necessary in the progress of research in organic chemistry, and he was not at all conscious of the danger he was creating."

"The biggest job which faces us today is the work of the scientist in the responsibility of the scientist and the rest of the community."

"One item of our properly applied might find work for tens of thousands, and another three thousand of work. One result of research wisely applied may save human lives and another destroy them."

"It is a tragedy when the scientist's responsibility should end with the announcement of his discovery."

"A. S. Church, who, as an executive of the British Science Club and the Association of Scientific Workers, was concerned with the British Association plans for a 'brain trust' to maintain a check on discoveries and their applications is not hopeful for the future. He put it this way: 'The efforts we made to get scientists to weld themselves into a profession with a corporate sense of responsibility like lawyers, doctors and others, have failed abjectly.'

"Some time ago we made an attempt to set up but have failed. We were prepared to limit ourselves against work which might have harmful possibilities to the community."

"The French philosopher, who said, 'No picture is worth 10,000 words,' was paying an advance tribute to the blackboard and its 100-year-old teammate, chalk."

The trouble is that the average scientist is far more arrogant about his work than the normal man, and he declines to admit any measures which would be construed as a restriction on the pursuit of knowledge."

"But this freedom in research has great dangers to the world. We could have an atom like other professions. It is up to the great leaders of science to give a lead in this respect. It is time that the man in the laboratory realized how his work affects the man next door."

The Only Drawback

Two old scientists, confirmed bachelor in the backwoods. The conversation drifted from politics and finally got around to cooking.

"I got out of this business once, but I never could do nothing with it."

"Too much fancy work in it, eh?"

"Yes, yes, yes. Every one of them recipes began the same way: 'Take a clean dish, and that settled me.'"

THURSDAY, DEC. 10th 1935

The festive season gives us
a opportunity, not only to ex-
tend to you a warm and timely
greeting, but also to ex-
press our appreciation of your
favors of the past twelve mon-
ths.

That Christmas may be a
Merry and Bountiful one and
that the coming year may bring
an abundance of all that makes
life worth living for you and
yours is our sincere and friend-
ly wish.

How The Turkey Changed
Christmas Fare

Among the culinary gifts
from the aboriginal inhabitants
of North America to the white
man — cornmeal foods, pemmi-
can, succotash, pumpkins, squa-
sh, sweet potatoes, fish and
wild fowl and clams and beans
baked in clay, maple syrup and
cane sugar, — 10 c. turkey
sands supreme. N.A. 13 three
hundred years have passed since
the American turkey displac-
ed the vaunted Sir Loin and Baron
of Beef from their proud po-
sitions on the British Christmas
table and vanquished for ever
the claims of roast guinea, grou-
se, quail, cranes and swans as the
Christmas masterpiece of the
festive board. Indeed, to-day
as dominant is the North Ameri-
can bird that Christmas through-
out the English speaking world
is not Christmas without a
turkey.

The earliest documentary evi-
dence of the Americanization of
European dietary is set forth in
an ecclesiastical ordinance by
Cranmer, Archbishop of Canter-
bury, in which is mentioned
"the turkey cock" as one "the
greater fowl" of which an ec-
clesiastic was to have "one
quail on a dish." The learned Arch-
bishop could not have referred to
"the Canadian turkey cock," for
the Canadian turkey is a
noble bird capable of supplying
sustenance to many, and what a
generous repast! Browned to a
nicety, fragrant as a zopher
from Cayenne's Isle and towering
on regal mien above the puerile
platter the Canadian
turkey is a feast for a king.
And also a feast for the mind,
for with consumption comes
the spirit of Christmas, and all
we are brothers. Tranquility,
harmony, concord. Peace of
men of Good Will.

The Canadian turkey is fam-
ous for its taste and bountiful
proportions, and thousands
each year grace the old country
Christmas board over and above
the many thousands on Cana-
dian Christmas tables.

The export of turkeys and
other poultry to Great Britain
has assumed very large propor-
tions, as a result of the fine rep-
utation gained by the shipments
of previous years. The average
weight of a box of turkeys for
export is 125 pounds, while the
average box of chickens weighs
60 pounds. From January 1st
to November 24th of this year
(1935) no less than 42,029 boxes
of poultry were exported, in
comparison with 13,712 boxes
in the corresponding period of
1934. This, of course, does not
include the large Christmas
trade now in progress.

A Thought for Christmastide

"God Bless Us, Every One!" said
Tiny Tim.

MANY years have passed since
Charles Dickens wrote "A
Christmas Carol" with its sur-
real revelation of the soul cramp-
ing power of greed for material
wealth, and its glowing picture of
the mental and spiritual peace that
comes to those whose sympathy for
humanity finds outlet in deeds as
well as in words.

A few years before the world about
us made the practical ap-
plication of the lesson Dickens
sought to teach. Everywhere, in
the country side, in the villages, in
the towns, in the city, there are
Tiny Tims. There are older folks
too, sick in body, troubled in mind,
oppressed with fears for those de-
pendent upon them, almost worn
out with the strain of the battle of
life. Sometimes you have won-
dered how they managed to get
along, from what source they draw
their unquenchable belief in the
coming of a brighter day.

To such as these a kindly
thought put into action, may
make all the difference between "A
Merry Christmas," and one in

which the smile of courage is all
too close to tears. The reunion
with your own family circle and
your chosen friends will be illu-
minated by a more radiant glow if you
know that in at least one home
bodily needs have been satisfied
and faith in mankind renewed, be-
cause of your thoughtfulness.

THERE may be others too in no
want for that which money can
buy, but whose souls are parched
for lack of the encouragement you
could give. The day will come
when it is too late to wish that the
friendly smile and the word of
cheer had been as freely given as
they were longingly hoped for.
Be prodigal with them now. Banish
false pride and cultivated apathy.
Remember the story of the first
Christmas, so old yet ever new.
Open with the door of your heart
to its message and its glory. Be
sure you find the Christmas spirit
marching with you through all the
days of life; so shall you always
be able to say with the abiding
faith of poor and crippled Tiny
Tim.

"God Bless Us Every One!"

—Wm. Bards

House Of The Future

Look First In Architectural Contest For Cheap Dwelling

A \$5,000 "House of the Future" on view to large crowds at Rockefeller Center is the first of some 500 model houses built on the same plan which will be displayed throughout America and may be influential in changing the country's dwellings to small flat-roofed units of modern design. Anything new in housing is attracting large crowds, which the people who see things around corners interpret as meaning a new boom.

The "House of the Future" is not a factory-made job. It is the prize-winning plan in an architectural contest for a house at that price. But a factory-built house announced by the sponsors of the contest was announced at \$3,000. Which may be indicative of the future competition the individual builder is going to get from mass production.

The floor lamp, the delight of the women and the bone of the men is seen in this "House of the Future." All walls are architectural built into the walls or ceiling.

The windows are steel casements with spring wide open. In the room there are three beds and a pull-out sofa. The partition between the living-room and dining space is made of clear glass. The three beds have been folded out. It is an outside wall of one of the bedrooms.

The electric oven has a temperature control with an operating clock. Put in your leg of lamb before you go out in the morning. Let the temperature dial at 300 Fahrenheit. Let one dial of the clock turn the other at 6.00. When you return home late at 10.15 the lamb will have been cooked and held 10 minutes for you in the warm oven.

A clotheshopper is built under the bathroom wash bowl. In the room three walls each have a different color. The fourth is mostly glass. It is not bad but you have to see it yourself to believe it.

Mr. Rockefeller, Jr. looked it over, but is still living in his "house of the past."

Italy Put On Diet

People Must Eat Less In View Of Sanctions

Premier Mussolini of Italy has put the nation on a six-month diet to fight the sanctions imposed by the League of Nations.

The first of the measures, effective Nov. 5, ordered restricted use of means to reduce the necessity of imports, and restrictive measures were also put on public display.

It is due to also preparing a plan to reduce the governmental use of paper and other supplies that are governmentally imported.

The first of the orders to become effective will close the restaurants on Tuesdays and Wednesdays during the duration of the diet. Sale of beef, poultry, and pork will be rigidly restricted. The butcher shop, in payment for the day's closing, will be permitted to remain open Sundays until 11 a.m.

Hotels, restaurants and dining cars will be forbidden to serve more than one meat or fish dish at a meal.

To increase the food supply the fish industry promised to increase production. Restrictions on game have also been lifted to encourage its use as a food.

Spaghetti and bread were found to be safe because the 1934 wheat crop was officially given at 282,000,000 bushels, which, plus the reserve stock, is considered sufficient to cover the nation's needs.

Sea Fisheries Gain

Canada's sea fisheries registered an increase of more than 27,900 cwt. in quantity and \$19,000 in inland value during August, compared with the same month of last year. Catches of sea fish and shellfish totaled 1,173,000 cwt. with value of \$1,173,000. The fisheries are headed by \$2,502,600.

August landings on the Pacific coast increased by nearly 41,000 cwt. and landed value by over \$64,000. On the Atlantic coast the landed value increased by almost \$9,000, but the quantity of fish and shell fish taken fell off by approximately 13,000 cwt.

Having spring steel coils that curve inward, a new look rock case emerges when additional coils are placed in it.

"You look like a nice sensible girl. Let's get married."

"I'm just as nice and sensible as a look."

AUSTRALIAN STRONGEST MAN DEFEATS STRANGULATION

"Young Apollo", whose real name is Alex Anderson, is twenty-four years of age and weighs only 150 pounds, but at a recent demonstration in Melbourne, Australia, he defied strangulation when four men applied their weight in a rope around his neck. Here we see him performing this amazing feat. The same day he dragged three automobiles, each carrying six passengers, a distance of 35 inches. The cars weighed almost four tons and his effort by Young Apollo was a record.

The Modern Chinese Woman

Anti-Foreign Feeling Rapidly Fading, Especially Toward The British

The emancipation of Chinese women is not an established fact, and although comparatively recent is complete, stated Miss Florence Kirk, English teacher in Chingling College, Nanking, China, while in Nanking on furlough after three years spent in the city.

Many married women in China continue with their careers, she said. In China today the found there is pressing need of trained workers, and men are only too willing to welcome women to jobs which they can fill.

China's unemployment for educated young people is non-existent, she stated. She added there are two groups she found the women of the college in which she teaches.

In 1931 the formation of the Chinese republic opened the way for Chinese women to gain their freedom. Miss Kirk stated, and they have made rapid progress since then. In many ways she found the women of the college in which she teaches.

At a field meeting in Nanking, she said, the government, in an attempt to make the gathering of a truly national character, decided to invite speakers to be used by speakers. The audience was confused by the different dialects and to time the English speakers were forced to repeat to English.

China's anti-foreign feeling is rapidly fading, she stated, especially toward the British.

Might Mean Peace

If Men Who Starred Wars Were Forced To Fight

A university here has made the revolutionary proposition that governments in the future protect property by drafting only men past fifty for combat, troops to time the English speakers were forced to repeat to English.

In theory there is much to be said for his proposal. The idea of making cannot follow of young men, but the future of nations depends on it is not altogether sensible, particularly when it is remembered that wars are generally started by men over 50 years of age. It is not young blood essential to national progress.

There would be no more wars if the nations of the world would enter into a pact making men under 50 exempt from military service. This would never be such a pact because all nations, including those sending troops of young men to the border, would be made by men over 50. But if such a pact were possible, the men over 50 would possibly declare per se that they would not fight.

It is the task of a large corps of men to sink new lands in the wake of Italy's advancing troops in Ethiopia to provide the invaders with their all-important water supply. Water piped from one of the new wells is being taken to a hundred feet.

It is the task of a large corps of men to sink new lands in the wake of Italy's advancing troops in Ethiopia to provide the invaders with their all-important water supply. Water piped from one of the new wells is being taken to a hundred feet.

New Dress For Steel

Can Be Made To Resemble Marble Or Tapestry

Steel has been given many disguises in its career; it may be made to look like a mahogany or walnut panel or plaster wall with equal ease. But never until recently has steel been able to look like a slab of marble or a Gobelin tapestry.

A notable step forward was made in steel when it was used with mirrors, but with either ordinary photographs, or with decalcomania, these same "transfer pictures" you used to stick on the back of your hand when you were young.

To make this versatile material, some plate is heated almost to the melting point of its coating of lead alloy. Then a thin layer of lead is applied. The lead is then rolled into the softened alloy surface, immediately chilling keeps the fabric from being changed.

A photograph colored decalcomania of whatever is to be "reproduced" is laid on this fabric surface, saturated with resin and baked under pressure.

The result is a laminated sheet of steel, stone, felt, and many designs. The sheet has steel's strength, but it neither looks, nor feels, nor sounds like steel.

This new material has been suggested for interiors of office buildings, store fronts, and other applications where steel's strength and low cost are advantageous, but where the appearance of marble, or any colored fabric is desirable.—Daily Commercial News, Toronto.

The English Rose

Over 250,000 Sold At Covent Garden In One Day

The rose can be traced back to Great Britain to the time of the Roman occupation. It is believed that there were originally seven strains, including the Dog Rose, the Scotch Rose, the Eglantine and the White Ayrshire Rose.

A notable step forward was made in rose cultivation in 1876, when the National Rose Society was founded, and its awards for "new and superior varieties" have done much to stimulate the industry. The British cut rose industry employs 100,000 people and has a turnover of about £150,000,000, rose growing alone employs 3,300 people, exclusive of those engaged in transport, marketing and retail selling.

British rose growers in 1931 produced 6,000,000 bushes in 1934, 18,000,000 in 1935. Last July—at the height of the season—more than 200,000 roses were marketed at Covent Garden in one day, and every single bloom was sold.

Western Canada Grows Rice

Hunters Planted Seed Along Lake Superior To Draw Ducks

Rice always regarded as a staple of China and Japan, is now being successfully grown in Western Canada.

Along the shores of Lake Superior and other small lakes nearby an ever growing harvest is being gathered annually. Originally used to draw ducks closer to hunters, a considerable part of the rice is now used by Indians for food and as a feed for domestic animals.

Eight years ago a half acre was planted on the shores of Georgian Bay. Today the rice covers almost 100 acres. Other districts which have made the experiment report small but steadily increasing returns.

The best example of natural growth is now at Whitefish Lake. It covers the lake for the most part and thousands of ducks are drawn to it during the shooting season.

Made Of Good Stuff

A. D. Wilson, Springfield, Arkansas, has bought a new cap—his first in 10 years. "It was a pretty good cap," the farmer commented as he discarded the headgear he had been wearing since its purchase in 1926.

The Art Of Journalism

American Publisher Says Anybody Who Can Think Can Write

Whoever people may think about what he writes, few practicing journalists can find professional fault with any writing. William Randolph Hearst writes it. Lately, Washington Columnist Paul Mallon, had the nerve to ask Publisher Hearst if his writings were all his own. Last week Mr. Hearst replied as follows:

"You asked me if I write all the articles I sign. That, sir, is not a very complicated question. . . . I am a professional newspaperman. Mr. Mallon, and I have been working at the newspaper business—not playing with it, but working at it—day and night for over 50 years. . . . Of course, I write my signed articles, and many more that I do not sign. . . . I do not think it is such a trick to write. Anybody who can think can write."

"You ask me when I do my writing, I do most of it at night. There are no executive problems during the daytime. . . . At night things cool off and quiet down. The stars are out. . . . I think a story thought is likely to come swirling out of the darkness like a bat, and light it up. . . . I think I could write books that live, the Dickens or Thackeray. . . . All I do is scratch down a few evanescent thoughts that are born in the night, and hardly live out the day. . . .—Times."

Debt Owed To Indians

Early Settlers Learned Many Useful Things From Red Men

The debt we owe to the red man? What debt? Well, perhaps it doesn't sound like much in an industrial age of skyscrapers, delicatessens and countless modern conveniences. How to plant and cultivate corn and to store it for winter. How to make shoes. How to cure corned beef. How to pumpkins, squashes, sweet potatoes, beans and other strange edibles of the Indian. How to stack deer, elk, moose and buffalo and how to dry fresh meat in the sun. How to make oysters. How to trap rabbits and to catch wild fowl. How to spear fish and to induce them in soft clay for baking. How to raise hogs. How to get sap from maple trees and how to get sugar from the sap. How to fashion canoes, sleds, and snowshoes.

Not much of a debt in terms of today, but its size was readily recognized by the new settlers to whom such knowledge meant life instead of death in the wilderness 300 years ago. Realize it or not, the fellow who lives in apartment comfort, with never a worry about shelter or food, owes a lot to those first Americans, who in Will Rogers' pungent phrase, met the Mayflower.—St. Louis Post-Dispatch.

Presence Of Mind Needed

Nerves And Self-Control Required For The Car Driver

An automobile driver needs a good deal of supplementary equipment—luck, tire luck, sunlight and no sun. The most important item of equipment, however, is one that can't be bought at any equipment store: the necessity of courage to stick around and make a report after he hits somebody with his car.

A homeless wanderer was struck by a speeding car and killed on a Cleveland street the other night. Police traced the driver and pinched him a few hours later. He was in a state of nervous collapse.

"It was so horrible and I was so scared and sick I didn't know what I was doing," he said in explaining his haste to get away. "I just got back in the car and drove away. I wouldn't leave a dog lying in the street, let alone a man. But I didn't know what I was doing."

It would be a good thing if every motorist could make a little agreement with himself to the effect that if his car hits anyone he will stop, give his victim whatever aid he can, and then report to the police before going home.

It takes nerve, self-control, "mannishness"—but a man who is a man must be ready to take the consequences of his mistakes.—Vancouver Sun.

Provelins In Helow Rope

It took a rope to fight to the North Pole in 1907, the dirigible "America" carried ham, bacon, butter, bread and other provisions in a 144-foot hauled leather saddle-rope, six inches diameter, the rope was so constructed as to move over ice floes without catching and fast in the water.

True flying fish can make gliding flights through the air for more than 100 feet.

Small Home Industry

Two Million Dollars Business Operates Through The Large Stores

No markers are necessary to inform the industrial driving force in Georgia that the Tennessee boundary line has been passed. Throughout the country, the bed-spreads flapping in the autumn breeze emphasize the northwestern Georgia stretch of the Dixie Highway.

For 60 miles—from Ringgold on the north in Acworth on the south—caravans of caravans spread a canopy of color to the natural scenic beauty of the highway.

"Poetic" and "romantic" Georgia, as it is the first reaction of the stranger.

After frequent remarks about the "size of the wash," the stranger will then ask why every nine out of ten spreads have the peach design.

That one is easy! This pattern can be made of the "left-over" thread, due to the many colors in the design, a neater pattern to the spread worker.

But all jokes aside, this freestyle industry has practically eliminated the "depression" from the conversations in northwest Georgia. The two-million dollar small home industry, employing some 100 to 15,000 home workers with an annual payroll close to \$600,000, has given millions of dollars to hundreds of families who had no other means of support except apply to the government for relief. Majority of these workers are women.

Approximately 85% of the work on the spread is done by the women of tenant farmers. Crisples and old persons in their declining years of life, delicately and delicately needwork in order to remain financially independent and keep off the relief.

The industry does not condone its sales to the whims of a fickle market. Public just about 19% leave Georgia this way. The big volume of business is done through department stores, manufacturers and distributors.

More than a million spreads will be shipped by manufacturers in 1935, it is predicted. Advance orders indicate this will be the best year in the history of the industry with the volume of sales rising over the two-million dollar mark.

In 1933 the total volume of sales was nearly a million and a half dollars. In 1934 the sales were a trifle higher.

There are 30 recognized manufacturers and distributors. The largest are in Dalton, Ga., three at Calhoun, Ga., one at Chatsworth, Ga., one at Rome, Ga., another at Hill City, Ga., one at Sumter, S.C., one at Rockledge, Fla., and another at Tallahassee, Fla. Two Dalton plants have established factories in Canada.

Alberta's Fire Toll

Property Loss In Province During 1934 Was \$11,717,310

Fire took a death toll of 25 persons in Alberta during 1934, an increase of five over the year before, according to the annual report of the fire commission for the province.

Of the deaths, 37 were due to the improper use of gasoline in cleaning clothes or lighting fires with coal oil. School buses in country districts present a serious problem, says the report. This is due to the majority being of log or frame construction with little or no protection.

Last year, 23 schools burned, with a total loss of \$31,422, compared with 20 the year before when the property loss amounted to \$20,000.

During the year, 28 fires of incendiary origin in various parts of the province were investigated.

Property loss in the province last year amounted to \$11,717,310, a decrease of \$258,342 compared with the year before.

Quite A Family Affair

The same Jones apparently eight times on a marriage register in England—narrating a wedding at Ellersmere Park parish church. The Rev. J. J. Jones officiated at the marriage of David Blinn Jones, son of David Maureen Jones, and Miss Ruby Jones, daughter of David Maureen Jones. The two witnesses were Ronald Jones and Miss Ruby Jones.

No Excuse For Neglect

There were over 5,517,276 Canadian citizens to vote in the federal election this year and 4,522,978 of them exercised their franchise. It was a record vote—surprising, but still not good enough. Many of these million right-handed old-fashioned people who don't vote would have a hard time finding a real excuse for their neglect.

Local Items

The exceptionally fine spring ice weather of the past month has been much appreciated by many southern Alberta citizens.

It is expected the federal house will open for its first session under the new government on January 30th.

The Duke of York second son of King George and Queen Mary, celebrated his 40th birthday last Saturday.

The high school Literary Society will hold their annual social evening in Cliff Hall on Friday evening of this week. A good program, has been arranged for the occasion.

Miss Mary Farther was taken to the hospital Tuesday to undergo treatment for internal trouble. She underwent an operation yesterday morning and is now getting along as favorably as can be expected.

Mr. P. Campeau has been confined to his home for the past few days suffering from a slight attack of heart trouble. His many friends will be glad to learn he is now recovering slowly.

Corp. E Crump has taken charge of the Medicine Hat R. C. M. P. detachment succeeding Capt. J. J. Weaver who has been promoted to the position of patrol sergeant of the Medicine Hat section.

Mr. R. Phillips met with a bad accident last week-end while working with some iron castings in repairing a stove. A piece of the metal hit him in the eye and became embedded in the eye ball. So serious was the wound that he was taken to Calgary for an operation to have the metal removed. For a time it was thought he would lose his eye sight but now it is hoped to save it. Although suffering considerable pain Mr. Phillips is now gradually improving.
